

Q. No.	Question (6 Marks)	CO	Bloom's Level
Q1	Discuss the key ethical issues in Information Systems. Explain privacy, workplace monitoring, and power over users with suitable examples.	CO5	Analyze (L4)
Q2	Explain Information Security as the first line of defence. Discuss the role of people (staff), organizational policies, awareness programs, and best practices in protecting information systems.	CO5	Understand (L2)
Q3	Explain the second line of defence in Information Security. Discuss the role of technology in prevention, detection, and response to security threats with suitable examples.	CO5	Analyze (L4)
Q4	Explain Cloud Computing and Mobile Computing. Discuss their architecture, advantages, challenges, and business applications in modern organizations.	CO6	Apply (L3)
Q5	Differentiate between E-commerce and M-commerce. Explain their features, benefits, limitations, and real-world applications with suitable examples.	CO6	Analyze (L4)
Q6	What is the Internet of Things (IoT)? Explain its architecture, components, applications, advantages, challenges, and future trends in smart environments.	CO6	Analyze (L4)
Q. No.	Question (6 Marks)	CO	Bloom's Level
Q1	Explain Information Security in detail. Discuss the first line of defence (People/Staff) and the second line of defence (Technology). Explain the role of prevention, detection, and response mechanisms in protecting information systems with suitable examples.	CO5	L4 – Analyze
Q2	Differentiate between Cloud Computing and Mobile Computing. Explain their architecture, advantages, challenges, and business applications with suitable examples.	CO6	L3 – Apply
Q3	What is the Internet of Things (IoT)? Explain its architecture, components, applications, advantages, and challenges in modern smart environments with suitable examples.	CO6	L4 – Analyze
Q.No.	Question (6 Marks)	CO	Bloom's Level
Q1	Explain the CIA Triad (Confidentiality, Integrity, and Availability). Discuss its importance in protecting organizational information with suitable examples.	CO5	L2 – Understand
Q2	Discuss various cyber threats affecting Information Systems. Explain malware, phishing, ransomware, spyware, and social engineering attacks with suitable examples.	CO5	L4 – Analyze

Q3	Explain the deployment models of Cloud Computing. Compare Public, Private, Hybrid, and Community Cloud with suitable examples.	CO6	L4 – Analyze
Q4	Explain the service models of Cloud Computing (IaaS, PaaS, and SaaS). Compare their features, advantages, and applications with suitable examples.	CO6	L3 – Apply
Q5	Discuss the security challenges in Cloud Computing. Explain data privacy, access control, compliance, and disaster recovery with suitable examples.	CO6	L4 – Analyze
Q. No.	Question (8 Marks)	CO	Bloom's Level
Q1	Explain the concept of Managing in the Internet Age. Discuss how Internet technologies have transformed modern organizations in terms of communication, business operations, collaboration, customer relationship management, and decision-making with suitable examples.	CO4	L4 – Analyze
Q2	Discuss the importance of Information System investment in modern organizations. Explain the factors that managers should consider before investing in Information Systems, including cost-benefit analysis, organizational requirements, scalability, security, and return on investment (ROI), with suitable examples.	CO4	L5 – Evaluate
Q3	Explain the concept of Technology Roadmap in Information Systems Management. Discuss its objectives, components, implementation process, benefits, and its role in supporting digital transformation and long-term organizational growth with suitable examples.	CO4	L5 – Evaluate
Q. No.	Question (8 Marks)	CO	Bloom's Level
Q1	Evaluate the effectiveness of Information Systems in transforming modern organizations. Assess how Information Systems improve organizational efficiency, communication, decision-making, and competitive advantage with suitable examples.	CO1	L5 – Evaluate
Q2	Evaluate the impact of the evolution of computing from ENIAC to Artificial Intelligence on modern businesses and society. Justify how technological advancements such as commercial computers, personal computing, the Free Software Movement, and the Internet have driven digital transformation with suitable examples.	CO1	L5 – Evaluate
Q3	Evaluate the strategic role of Information Systems in achieving competitive advantage. Assess the effectiveness of Porter's Five Forces Model and Value Chain Model in helping organizations improve business performance and sustain long-term growth with suitable examples.	CO3	L5 – Evaluate
Q. No.	Question (8 Marks)	CO	Bloom's Level

Q1	Evaluate the effectiveness of the IT Interaction Model in managing Information Systems. Assess how the interaction among People, Organization, Technology, and Management contributes to organizational efficiency, decision-making, and long-term business success with suitable examples.	CO4	L5 – Evaluate
Q2	Evaluate the major challenges faced by managers while managing Information Systems in the Internet Age. Assess how decisions related to Information System investment, organizational capabilities, service centralization, information security, and technology roadmap influence organizational performance and digital transformation.	CO4	L5 – Evaluate
Q3	Assess the strategic importance of Information System management in modern organizations. Evaluate how effective planning, Information System investment, organizational capabilities, information security, and technology roadmap help organizations achieve competitive advantage and sustainable growth with suitable examples.	CO4	L5 – Evaluate
Q. No.	Question (8 Marks)	CO	Bloom's Level
Q1	Evaluate the importance of ethical practices in Information Systems. Assess how privacy, workplace monitoring, and power over users influence organizational security, employee trust, and ethical decision-making. Suggest suitable measures to maintain a balance between security and individual privacy with examples.	CO5	L5 – Evaluate
Q2	Evaluate the effectiveness of Information Security mechanisms in protecting organizational information. Assess how the first line of defence (People/Staff), second line of defence (Technology), and prevention, detection, and response mechanisms contribute to reducing security risks and ensuring business continuity with suitable examples.	CO5	L5 – Evaluate
Q3	Assess the strategic role of emerging technologies in digital transformation. Evaluate how Cloud Computing, Mobile Computing, E-commerce, M-commerce, and the Internet of Things (IoT) improve business efficiency, customer experience, organizational competitiveness, and sustainable growth with suitable examples.	CO6	L5 – Evaluate
